

Harrison Haas

Project A Proposal: Cribbage Assistant

Description:

- Many people don't know how to play cribbage, or don't like the mathematical aspects of the game
- This program will compute a cribbage hand, crib, or determine the ideal cards to discard
- If you want to play cribbage with someone who doesn't know how, you can give them this program
- If you want to get better at cribbage you can use this program

Identification of the target user:

- Cribbage players who want to improve
- People who want to play cribbage but don't like math or don't know the rules

Outline of the Classes:

Cribbage Assistant

- Model

- public class Card

- public class Deck

- public class Hand

- public class TopCard

- public class ScoreBreakdown

- public class ScoringEvents

- public class discardCalculator

- public class RandomHandGenerator

- Controller

- MainController

- public class DiscardController

- public class HandScoreController

- public class CribScoreController

- public class RandomHandController

- View

- public class MainFrame
- public class DiscardFrame
- public class HandScoreFrame
- public class CribScoreFrame
- public class RandomHandFrame

Timeline:

Feb 22-28:

Tasks:

- Implement old code into new classes in new format
- Write new code for the new MVC format

Classes:

- All Model Classes

Mar 1-5

Tasks:

- Build the user interface and connect it to the models created in the prior week

Classes:

- All View and Controller classes
